

NPK 10-26-26

Ternary fertilizer, complex granule

Use

NPK 10-26-26 is a complex granule fertilizer, highly concentrated and with excellent nutritional balance, containing the three primary macronutrients. This formulation increases agricultural productivity, prevents soil degradation and improves fertility of deficient soils. NPK 10-26-26 can be used directly for soil fertilization or as raw material in the industry for production of mineral fertilizer blends.

Packaging

- In bulk
- Big bags available upon request.

Properties

Physical

Physical state: granule
Appearance: beige

Chemical

Nitrogen: 10% (in ammoniacal form)
Phosphorus: 26% (P_2O_5 soluble in CNA + water)
Potassium: 26% (K_2O soluble in water)
