

NPK 15-15-15+9.5S

Ternary fertilizer, complex granule, with sulfur

Use

NPK 15-15-15+9.5S is a complex granule fertilizer, highly concentrated and with excellent nutritional balance, containing the three primary macronutrients and sulfur, with 100% of the sulfur in sulfate form (SO_4). This formulation increases agricultural productivity, prevents soil degradation and improves fertility of deficient soils. NPK 15-15-15+9.5S can be used directly for soil fertilization or as raw material in the industry for production of mineral fertilizer blends.

Packaging

- In bulk
- Big bags available upon request.

Properties

Physical

Physical state: granule
Appearance: light beige

Chemical

Nitrogen: 15% (in ammoniacal form)
Phosphorus: 15% (P_2O_5 soluble in CNA + water)
Potassium: 15% (K_2O soluble in water)
Sulfur: 9.5% (in SO_4 sulfate form)
